

The availability and nature of other treatment options:

Other treatment options for your condition may include:

- Self-administered, over-the-counter analgesics and rest
- Medical care and prescription drugs, such as anti-inflammatory, muscle relaxants, and painkillers
- Hospitalization
- Surgery

If you chose to use one of the above treatment options, you should be aware that there are risks and benefits of such options and you may wish to discuss these with your primary medical physician.

The risks and dangers attendant to remaining untreated:

Remaining untreated may allow the formation of adhesions and reduced mobility which may set up a pain reaction further reducing mobility. Over time, this process may complicate treatment by making it more difficult and less effective the longer it is postponed.
